## Allowable Subject Matter

Claims 1 – 11 are allowed. The prior art of record fail to teach a clutch control device/actuator comprising, among other limitations, means configured to change the state of a clutch to a half-connecting state or to a disconnecting state according to a driving wheel acceleration slip related to an amount when the clutch is in a connecting state or according to a vibration predetermined degree; convergence rate obtaining means for obtaining a convergence rate showing a quality of the convergence of the actual wheel speed related amount of a driving wheel when the actual wheel speed related amount converges to the target wheel speed related amount of the driving wheel from a state where the actual wheel speed of the driving wheel is smaller than the wheel speed corresponding to the target wheel speed related amount of the driving wheel when vehicle stabilizing control is executed.

## Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Yamamoto et al. (US 6,033,341) and Ishihara et al. (US 5,954,176) both teach a clutch connection/disconnection device/apparatus but not to the extent of changing the state of a clutch to a half-connecting state or to a disconnecting state according to a driving wheel acceleration slip related to an amount when the clutch is in a connecting state or according to a vibration predetermined degree; convergence rate obtaining means for obtaining a convergence rate showing a quality of the convergence of the actual wheel speed related amount of a driving wheel when the
